TITLE : DISPLAY DEVICE INTEGRATED WITH  
OPTICALLY FUNCTIONAL MEMBER

ABSTRACT : PROBLEM TO BE SOLVED: To provide a display device in which an optically functional member is integrated with a display part.

SOLUTION: In the display device provided with the optically functional member and the display part, the display part is provided with a transparent substrate, and the optically functional member is integrated with the display part via a transparent elastic layer. Also in the device, when the refractive index of the transparent elastic layer is defined as  $n_0$ , that of the optically functional member is defined as  $n_1$  and that of the transparent substrate is defined as  $n_2$ , the difference between  $n_0$  and  $n_1$  and the difference between  $n_0$  and  $n_2$  are  $\leq 0.2$  respectively.
